

Nucleophilic attack by Alon and Matthew

Oh, my, god. Matthew, look at that leaving group
It is so big.

It looks like, one of those fat halides

I like Substitutions and I cannot lie
Neil Garg can't deny

When you have a tertiary carbon in a polar place
And a good leaving group to displace
You get SN1, yo its not that tough
Three steps and that's enough
First step is dissociation
Solvent attack and deprotonation
Oh baby, I wanna get with ya
And make a mixture
Neil Garg tried to warn me
That O-chem might make me so ...
