

## Still Chemin' by Firuz and Aaron

I represent all the chemists across the world

Neil Garg is the name ahead of the game  
Giving us reactions, yeah, driving us insane

$S_N2$ , leaving group leaves

Nucleophile attacks simultaneously

It won't happen on a tertiary carbon (why?)

Sterical hindrance, so please pardon

$S_N1$ , easy as a breeze

Nucleophile attack after the leaving group leaves

**STUDY HARD!!!**
