

The Solvent Attack by Nishil, Neda G., Tianna

All these chemical reactions, what a difficult class
Reminds me of the labs that I've done in the past
Fo'real, I've memorized every element
The lectures are by Neil Garg, yo he's tellin' it
Yea, the process of dissociation
Carbocations, solvent attack deprotonation
And now I'm here bringin' substitution back
It's guaranteed that nucleophiles will attack
Carbon attached to the LG from the back
Halides, water, tosylates leave the pack
But not fluoride, because it's not stable
Please remember the trends on the periodic table
