

“So Fresh, It’s Organic”
by Elias S. and Aria F.

Watch Out!

That Neil Garg ridiculous, SN2 reaction so conspicuous
And row! Nucleophiles all on the prowl,
approach the backside, attack to make a bond
Forget about the base, I’m a spit the truth
Lesser basicity helps the LG move
So gimme the tosylate, it’ll be off with the OH,
or attach a hydrogen and make it H₂O.
Left the substrate, add the nucleo,
Just make sure you gotta go invert the stereo
And Wow, How you like me now,
Speed up the chemistry with aprotic sol...vent
Nucleophile you the one to please,
a lot stronger when you are not hindered sterically
That’s it? Sn2 reaction’s such a breeze,
oh yeah were at UCLA and this is 14Deeeeeeee
